

VFX Shot List — Scene 12 (Caravansera Interior)

Confidential — VFX Team & Director Only · 24 August 2026

Project: Project Golden Falcon · Scene 12

VFX Supervisor: Khalid Al Mazrouei

Total Shots: 14 (1 hero, 13 augmentation)

Budgeted Cost: AED 5,200,000 (approved Q3 board, includes AED 2.0M contingency)

Hero Shot: VFX-12-001

Description: The brass telescope lifts from the stone altar and rotates in mid-air, pointing south.
Duration: 8 seconds on screen.

Approach: Physical magnet rig on altar (built by Seekra Studios art dept). Telescope is real brass, weighing 4.2 kg. VFX removes the rig and adds the soft golden glow pulsing in time with the heartbeat sound design. Rotation is achieved practically with a concealed stepper motor inside the altar — VFX removes the motor shadow.

Vendor: In-house Seekra Studios VFX team. Estimated hours: 320. Delivery: 5 February 2027.

Augmentation Shots: VFX-12-002 through VFX-12-014

VFX-12-002: Candle flames enhanced with subtle particle simulation (13 shots in sequence). 8 hours each = 104 hours total.

VFX-12-003: Moonlight shaft through oculus — color grade adjustment + atmospheric haze. 24 hours.

VFX-12-004: Tarik's face — subtle reflection of glowing telescope in his eyes. 16 hours.

VFX-12-005: Dust particles in moonlight shaft — practical dust augmented with CG. 32 hours.

VFX-12-006: Telescope engraving close-up — falcon image appears to move slightly. 40 hours.

VFX-12-007: Wide shot of caravansera — candlelight balance across 400 practicals. 48 hours.

VFX-12-008: Tarik's hand on the telescope — skin tone continuity. 12 hours.

VFX-12-009: Altar surface — texture enhancement, blood-red velvet detail. 20 hours.

VFX-12-010: Background tapestry — pattern continuity. 8 hours.

VFX-12-011: Reflection in telescope brass — Tarik's face appears briefly. 36 hours.

VFX-12-012: Final pullback — composite of three plates (Tarik, telescope, candlelit interior). 80 hours.

VFX-12-013: Sky replacement through oculus — moon and stars. 24 hours.

VFX-12-014: Cleanup — rig removal, wire removal, safety mat removal. 48 hours.

Total Estimated Hours: 1,012

Average Rate: AED 5,200/hour (in-house rate)

Notes

All shots will be reviewed in dailies with Director Yousef Al Saedi and DP Marco Beltrami. Final delivery to color grading: 5 February 2027. The hero shot (VFX-12-001) is the critical path item — any delay there impacts the entire post schedule.

The magnet rig approach (vs. full CG) was chosen by the Director specifically for the weight and presence of the practical telescope. The VFX team has confirmed feasibility with the art department. Risk: if the magnet release mechanism is unreliable on set, we will fall back to a fully CG telescope for the lift shot — but this is Plan B and not the recommended approach.

VFX Supervisor	Khalid Al Mazrouei
Total Shots	14
Budgeted Hours	1,012
Budget (AED)	5,200,000
Delivery Date	5 February 2027
